Biological buffers

Many biochemical processes are significantly impaired even by small changes in the pH value. Therefore, it is often necessary to stabilize the pH value by adding a suitable buffer to the medium, without affecting the system under investigation.

Criteria for the selection of the right buffer system:

- Selection of the buffer for the correct **pH range**
- Determination of the optimal **pH of an enzyme**
- Determination of the optimal **buffer concentration**
- Selection of buffer substances according to the **application**
